PROFESSIONAL SUMMARY

Data Engineer with 3.5+ years of experience building scalable ETL/ELT pipelines and data lake solutions using Databricks, PySpark, and Delta Lake on AWS S3. Proficient in Medallion Architecture, CDC, and Spark performance tuning, with hands-on experience integrating enterprise sources including Veeva Vault, Salesforce, and SQL Server. Experienced in transforming complex data into actionable insights, ensuring data integrity and performance at scale.

TECHNICAL SKILLS

- **Languages:** Python, SQL, Scala
- **Big Data & Processing:** Apache Spark, Apache Iceberg, Delta Lake, ETL/ELT Pipelines, Medallion Architecture, CDC
- **Platforms & Tools:** Databricks, Cloudera, Modak Nabu, Linux
- **Cloud & Storage:** AWS S3, Microsoft Azure
- **Databases & Sources:** PostgreSQL, Oracle, SQL Server, MySQL, Veeva Vault, Salesforce
- **CI/CD & DevOps:** GitLab CI/CD, Azure DevOps, GitHub Workflows, Git

PROFESSIONAL EXPERIENCE

Modak Analytics | *Dataverse Data Foundation*

Feb 2022 – July 2025

Data Engineer I

Hyderabad, India

- Architected a scalable, multi-layered **Medallion data platform** (Ingestion, Curation - TL/ATL, Outbound) and built robust **Spark (Scala & PySpark)** ingestion frameworks to process data from various enterprise source systems across the **pharmaceutical domain**.
- Engineered high-throughput **PySpark** pipelines to process **terabyte-scale datasets**, writing optimized **Parquet files** to **AWS S3** to enable efficient querying and downstream analytics.
- Diagnosed inefficient **Spark** resource utilization and resolved bottlenecks by fine-tuning executor memory, core allocation, and shuffle partition configurations, achieving a **15% reduction** in compute costs.
- Designed enterprise-grade **CDC** solutions using optimized **SQL MERGE** and anti-join techniques, delivering a **70% reduction** in processing time and **40% decrease** in storage consumption while maintaining data consistency.
- Leveraged **Apache Iceberg** for **schema evolution**, **time travel**, and **snapshot-based versioning**, enabling reliable data auditability and rollback support across raw and curated table layers.

Modak Analytics | *Dataverse Modern Data Platform*

Aug 2025 – Present

Data Engineer II

Hyderabad, India

- Redesigned ingestion and transformation workflows on **Databricks Medallion Architecture** (Bronze/Silver/Gold), improving scalability, data standardization, and consistency across layers.
- Engineered modular, parameterized **ETL frameworks** leveraging Databricks **widgets** and **task values** to enable dynamic, reusable, and configuration-driven pipeline execution.
- Migrated legacy batch pipelines into **Databricks Workflows**, improving pipeline stability, reducing operational overhead, and enabling centralized orchestration and monitoring.
- Delivered advanced **CI/CD** automation via **Databricks Asset Bundles (DAB)** and **GitLab CI/CD**, establishing fully automated deployment pipelines across **development, staging, and production** environments.
- Optimized **Delta Lake** tables through **Z-Ordering**, partition pruning, optimize-write, and auto-compaction strategies, yielding significantly faster query performance and reduced scan overhead.
- Collaborated closely with data analysts and business stakeholders to curate and deliver high-quality **Gold layer** datasets powering enterprise dashboards, analytics workflows, and data-driven decision-making.

EDUCATION

Gayatri Vidya Parishad College of Engineering

Jul 2018 – May 2022

B.Tech in Electronics and Communication Engineering — GPA: 8.44

Visakhapatnam, India

ACHIEVEMENTS & CERTIFICATION

- Recognized by the client for contributions to successful project delivery and high-quality data engineering solutions.
- Microsoft certified: Azure Data Engineer Associate(DP-203).
